# WIRELESS AP Knowledge

## » Wired or Wireless Installation?

There are two types of CCTV Installation

### Wired CCTV Installation:

### Wireless CCTV Installation:

Wired installation is commonly used of CCTV installer mostly if they have a project for Analog Type Camera and sometimes for IP Camera. They use some Cables like Coaxial and UTP Cable.

Wireless installation is much effective for long distance video transmission using AP antenna. And also it can save more time, materials / labor cost, and it can save money for the clients.

## »» What is Wireless AP and CPE?

AP (Sender) is Master that send data to Slave or CPE. This is Computer end or NVR End Devices

Point A  
(AP Antenna)

CPE (receiver) is slave that receive data from AP . This is Camera end Devices

Point B  
(CPE Antenna)

## **>> Why choose DIP?**

**The first dial-up wireless AP in China. No need computer for operation, no technical settings, no professional guidance. Easy dial to achieve wireless communications.**

**DIPs are specialized for CCTV Video Transmission compare to other AP brands that applicable for NETWORK Transmission only, DIPs can transmit from Short Distance up to Long Distance Video Transmission.**

# »» How the DIP Switch Works?

**Button 1** changes the mode of the device. UP is access point (AP/SENDER) mode for using with your NVR and PC, etc.. DOWN is for CPE(RECEIVER) using with your cameras.

**Button 2 to 8** are for matching AP and CPE together. Different combinations corresponds to different SSIDs and different segments.

**Button 9 & 10** are for point to multi-point functionality. To use up to 4 cameras with one recorder, different orders of button 9 & 10 stand for different CPE.

**Each DIP AP(master) can be connected up to 4 DIP CPE(slave) only**

# Sample DIP Setup of DIP1526-H

## Access Point

1. Setup the Working Mode of all APs.
2. Set the Frequency of AP (master).
3. Follow the Frequency Pattern of AP (master) in CPE (slave).
4. Set the IP Keys of AP (master) and CPE (slave).
5. Follow the procedure in other AP (master) & CPE (slave) but in different Frequency Pattern.

# »» How many IP Cameras you can transmit?

## Bandwidth of camera:

H.264 Video Compression		H.265 Video Compression	
IP Camera	Bandwidth	IP Camera	Bandwidth
720P	1 - 3Mbps	1080P	1 - 4Mbps
960P	2 - 5Mbps	2K Res.	2 - 7Mbps
1080P	3 - 8Mbps	4K Res.	6 - 18Mbps

## Bandwidth of Wireless devices

Frequency	Transmission Speed	Model	Transmission Distance	Total Bandwidth
5.8 GHz	150Mbps	DIP1520	≤1km	20-60M
		DIP1526-H	≤3km	30-60M
5.8GHz	300Mbps	DIP3526-H	≤5km	40-60M
		TX23-3516K Upcoming	≤10km	50-150M

# » How many IP Cameras you can transmit?

DIP1526-H / 5.8Ghz / 150Mbps speed  
Maximum Bandwidth: 50M  
(save 30% value for camera bandwidth fluctuation)

10 units IPC x 3Mbps = 30Mbps

# Frequency : 2.4GHz&5.8GHz range of Frequency

**2.4GHz : 2.3-2.9GHz**

**5.8GHz : 4.9-6.1GHz**

**All Todair products support the extension of the bridge standard channel (spread spectrum), which can reduce the interference to the equipment if have more channel.**

2.4GHZ	5.8GHz
2.372G	4.96G
2.377G	4.98G

2.367G	5.905G
2.362G	5.925G
2.357G	5.945G
2.352G	5.965G
2.382G	5.985G
2.392G	6.005G
2.397G	6.025G
2.512G	6.045G
2.532G	6.065G

# Wireless Transmission Mode

This is the common Transmission Mode for Access Point (AP)

Point-to-Point Transmission (PTP)

For example PTP Transmission

- Two units of Wireless AP work as Fiber Cable or Network Cable.
- To the device which has Network port can be used for Wireless Transmission.

# Wireless Transmission Mode

## Point-to-Multi Point Transmission (PTMP)

-The Point-to-Multipoint topology (also called star topology or simply P2MP) is a common network architecture for outdoor wireless networks to connect multiple locations to one single central location. In a point-to-multipoint wireless Ethernet network, all remote locations do not communicate directly with each other but have a single connection towards the center of the star network where one or more base station is typically located.

For example PTMP Transmission

# Wireless Transmission Mode

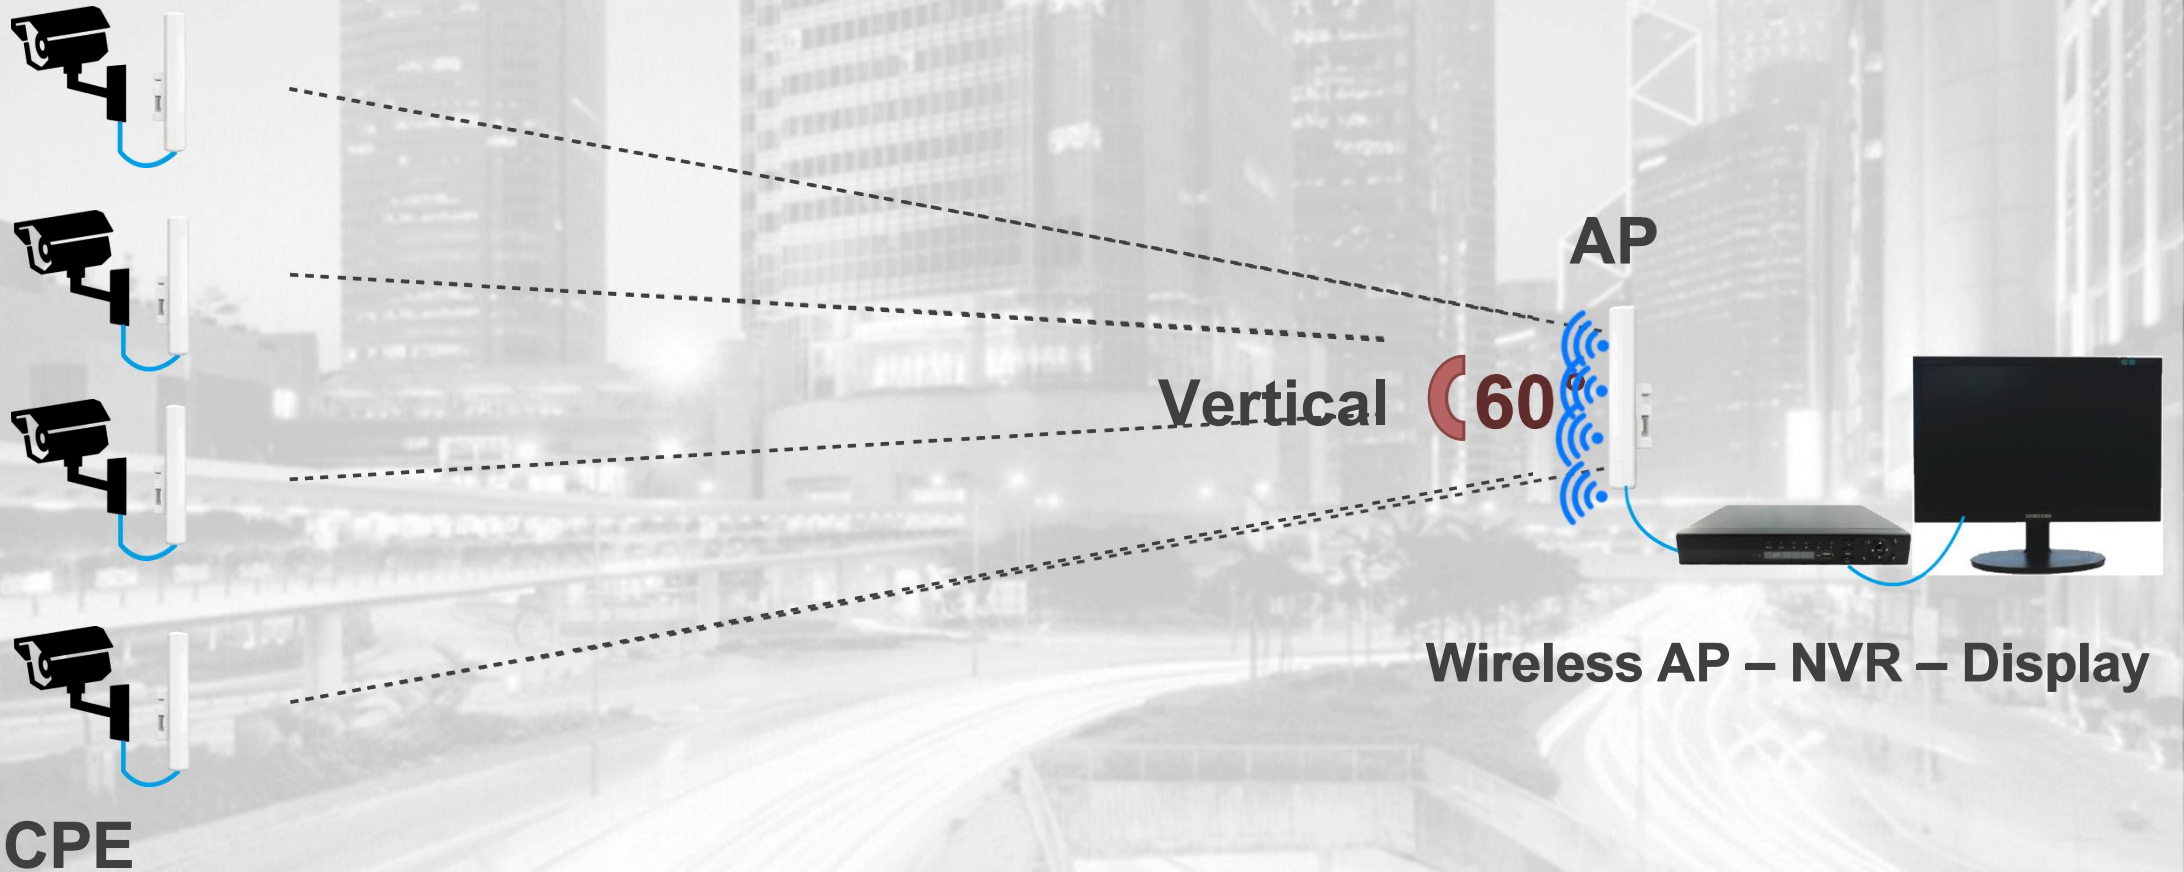

## Repeater / Access Point Mode

-A wireless repeater (also called wireless range extender) takes an existing signal from a wireless access point and rebroadcasts it to create a second network. When two or more hosts have to be connected with one and the distance is too long for a direct connection to be established, a wireless repeater is used to bridge the gap.

For example PTMP Transmission

# »» The transmission angle of wireless AP

**The farther the distance, the greater the scope of coverage.  
The smaller the angle, the farther the transmission distance.**

## Wireless Access Point Installation

The below installation diagrams should be used to help you plan your wireless system installation carefully for the best results possible.

The above installation image illustrates that it is important to mount your wireless transmitter & receiver on poles to raise them above any obstructions. Besides, it's equally important to make sure that there is a direct line of sight between them.

## Wireless Access Point Installation

When positioning your wireless transmitter and/or receiver units on roof-tops, provide a clear line-of-sight and avoid the possibility of signal multi-pathing by raising them on poles or locating them on the edge of the roofs.

# Wireless Access Point Installation

The ground plane can cause multi-path issues and can significantly affect the range of your wireless transmission.

# Outdoor PoE Switch -PoE29-RX548

## POE29-RX548

4 \* 10/100M PoE Port

1 \* 10/100M UPLINK RJ45 Port

Power: AC 100-240V/DC 48V

Backplane Bandwidth: 1Gbps

MAC: 4K

- ◆ Special for Setting Up Medium Wireless Network
- ◆ Supply standard 48V power in 100 meters

# Outdoor PoE Switch — PoE29-RX948

## POE29-RX948

8 \* 10/100M PoE Port  
1 \* 10/100M UPLINK RJ45 Port

Power: AC 100-240V

Backplane Bandwidth: 1Gbps

MAC: 4K

- ◆ **Special for Setting Up Medium Wireless Network**
- ◆ **Stand Strong Against Complex Environment Dedicated to Outdoor Data Transmission**
- ◆ **Innovative shuttered enclosure, achieving better cooling performance**
- ◆ **Easy wiring, flexible for outdoor project**

# Wireless Sales Trainning

# »» The trend of the development of wireless monitoring market

-H.265, the new camera protocol, making the camera bandwidth by half, it means to carry more IP cameras and improve the wireless cost advantage virtually.

Government supports efforts to enhance the construction greatly improved in the safety city, most of the projects can not be resolved with wired, especially the transformation of the old city, an urgent in need of wired and wireless combined.

So many famous CCTV companies to get involved in the wireless market such as HIKVISION and DAHUA. They have also launched it and all agree that these products are of most potential high market in the near future, indicating that wireless technology to achieve the mature stage.

Customers already know wireless AP for CCTV application. It has been widely used in all kinds of field.

# Competitor and Todaair

1. Most are white colors.
2. Need to fix the angle bracket and adjust it.
3. This shell we can be seen everywhere in the market.

## COMPARISON

1. Fashionable design.
2. With 360 ° adjustable bracket, no need to purchase another angle bracket.
3. Unique shell, the best choice for the projects

# Settings

## Traditional complex setting by computer

Need to enter the computer settings and system managements around 5-6 minutes. Need to be supported by the technical person.

## Non setting, buttons easily setting mode

No computer operation.  
No technical settings.  
No professional guidance.

# Powerful and stable Qualcomm hardware

**Realtek**

The low and middle-end  
Low power  
Heating problem  
Processing bottle-neck

**MTK**

The low and middle-end  
Heating problem  
High power consumption  
Weak stability

**Qualcomm**

The middle-and high-end  
Flexible performance  
Strong stability

# »» Is wireless stable?

The factors effecting the stability of WIRELESS

- A** Technology is not mature, it was by the transformation from the router.
- B** Uneven quality from online purchase of products.
- C** Expertise is not enough, much more complex settings.
- D** Wrong installation and debugging.

## » Successful Case

- We bid the wireless construction projects twice from 2014, We are the Appointed wireless AP supplier for EVERGRANDE.
- <http://www.evergrande.com/en/>

# Thank you!
